Seven Absolute Return Program : Trading signals

A triple-core performance engine

1

Momentum Signals

A time-tested investment approach

Newton's law applied to investing :

“ unless acted upon by external factors & forces, a market should continue to move in the same direction ”

2

Risk Signals

Allow us to go below the surface

High level of volatility is associated with a bearish market

Low level of volatility is associated with a bullish market

3

Macro Signals

Leading Economic Indicators tend to behave like “ canaries in coal mines ”

Analysing their trends constitute a highly valuable input

Long bias

- ➔ Bull markets offer more reward than bear markets
- ➔ Bear markets tend to end in V - Shape reversals that can cause strong damages to Momentum strategies
- ➔ Volatility swings tend to be harder to control during bear markets

Circuit breakers

- ➔ Disconnection between macro data and the stock market behaviour may hurt the P&L of our Macro Signals
- ➔ We have developed tools that allow us to turn off the macro trading signals when a disconnection is in place

Seven Absolute Return Program : Risk Management at an individual market level

The S&P 500 case : Our multiple time frame analysis allowed us to respond properly to a volatility curve shift

Portfolio global risk budget \times S&P 500 Weight in portfolio
= S&P 500 Risk budget

➤ Each volatility point receives 1/5 of the S&P 500 Risk budget

Volatility 3 months	3 lots	7 lots
Volatility 6 months	4 lots	6 lots
Volatility 9 months	5 lots	4 lots
Volatility 12 months	5 lots	4 lots
Trading Size	18 lots	33 lots

In October 2008 the steepening of the volatility curve of the S&P 500 was reflected in a lower trading size
